

# PFAS Remediation & AFFF Disposal

## CONTAMINATED WATER

Polluted water is a primary source of PFAS contamination in the environment. These contaminants can come from a variety of sources, making it crucial to have a reliable partner with the expertise to manage PFAS safely. Using Surface Active Foam Fractionation (SAFF®), our team will separate, transport, and destroy the PFAS in your water source.

## AFFF DISPOSAL

Aqueous Film Forming Foams (AFFF) are another major source of PFAS contamination. As industries and organizations reduce their use of AFFF, Precision Filtration Products offers sustainable solutions for AFFF disposal, transportation, and PFAS destruction. Our team guides you throughout the entire process, ensuring compliance with evolving regulations.

## TURNKEY SOLUTIONS

Our turnkey solutions provide comprehensive PFAS remediation and AFFF disposal services. From treating contaminated water to safely disposing of AFFF chemicals, we deliver effective, environmentally responsible solutions tailored to your needs.

## THE SAFF SOLUTION

- Removes > 99.9% PFOS/PFOA
- Daily Treatment Capacity: Unlimited
- Lowest cost per treated gallon
- Energy Efficient (2.5kw/1000 gallons)

## DESTROYING AFFF

- Safely collect, transport, and dispose
- Maintain compliance with regulations
- Minimize negative environmental impact
