

Flushing Skid Systems

Skid-Mounted Industrial Filtration Solutions

Looking for a skid mounted filtration solution?

PFP offers skid-mounted filtration systems for both rental and purchase, providing a flexible solution for both temporary projects and long-term installations. Our systems are engineered for reliable performance in demanding industrial environments and are designed for easy transport, quick setup, and efficient operation across a wide range of filtration applications.

High Velocity Flushing Skids

PFPUSA offers High Flow Flushing Skids designed to achieve high rates higher than what you would typically see for a standard mobile filter cart application. The high flow rates are essential for flushing larger diameter piping to hit the required Reynolds number and achieve your target ISO Cleanliness Code. Our equipment is designed with variable frequency drives providing great flexibility when operating.

- Flow rates of 30 to 2,000 GPM
- Suitable for particulate & water removal, oil conditioning, system flushing
- Explosion proof options available
- Auxiliary equipment available for turnkey setup

Bulk Fuel Filtration Skids

Looking to rent or purchase a high flow Pre-Filter and Coalescer Separator Skid to clean particulate and water contamination from fuel...look no further! Our bulk fuel filter skids are ideal for removing particulate and water from your fuel stream at high flow rates. They are designed for jet fuel and other bulk fuel Services.

- Flow rates of 500 to 4,000 GPM
- Cat walks for easy element change-outs
- Containment built into skid
- Built to ASME Code, Section VIII

Clay, Coalescer & Pre-Filters

Precision Filtration Products offers a range of skid-mounted filtration vessels for rental, designed to address common fuel contamination challenges in temporary or mobile filtration applications. Our inventory includes pre-filter vessels for particulate removal, coalescer-separator vessels for water separation, and clay treater vessels for removing surfactants, color bodies, and dissolved contaminants.

- Flow rates of 14 to 3,000 GPM
- Suitable for jet fuel, diesel, gasoline, & more
- Vertical & horizontal configurations available
- Carbon steel construction

Auxiliary Equipment Packages

Accessories for Skid-Mounted Industrial Filtration Solutions

Hoses

PFP supplies industrial-grade suction, discharge, and quick-connect hose assemblies designed for fuel, oil, coolant, and general transfer applications. Our cargo hoses handle high-volume movement and rugged field use, while cam-and-groove options allow fast, tool-free connections for temporary loops and rental equipment setups. Our stainless steel braided hoses are designed to endure high temperature applications.

- ***Stainless steel braided hoses for high temp bulk fuel/oil applications***
- ***Cam & groove hoses for rapid connect/disconnect in the field***
- ***Custom lengths, end connections, and compatibility options***

Containment

Our containment solutions protect equipment, personnel, and the environment during filtration, transfer, and field operations. We supply bracket berms, foam wall berms, and large-scale containment options that prevent spills, capture leaks, and maintain compliance on job sites. Lightweight, rapid-deploy designs allow easy transport and setup.

- ***Bracket berms and foam wall berms for equipment & hose containment***
- ***Protects against leaks and environmental exposure***
- ***Field-ready, durable, and compliant with industrial standards***

Valves

We provide a full selection of industrial valves for safe flow control, system isolation, and backflow prevention across filtration and transfer systems. Ball valves offer quick shutoff, while gate and knife gate valves support high-volume or particulate-laden fluids, and butterfly valves protect pumps using a rotating disc. Each valve is selected to match your operating pressure, media, and safety requirements.

- ***Ball, gate/knife gate, and butterfly valves for any system layout***
- ***Built for fuels, oils, coolants, and industrial fluids***
- ***Ensures safe isolation and prevents reverse flow damage***

Don't see what you're looking for?

We offer a complete selection of auxiliary packages designed to support any temporary or permanent fluid-handling system. From hose assemblies and flow-control valves to fittings & containment, every component is selected to integrate seamlessly with your existing equipment setup.
